Mr. Frank Turner  
F. J. Turner Company  
2528 White Oak Rd.  
Raleigh, NC 27609

Attn: Steve Roberts

Dear Mr. Turner

This is to inform you that the New Jersey Department of Transportation's New Technologies and Products Section has completed its review of your product, Turner polypropylene/fiberglass composite extension frames and rings for catch basins and manholes. Based on the performance data gathered through our own demonstration projects, as well as through testimonials from other government agency users, these products have satisfied our demonstration requirements and are recommended for approval for use on NJDOT construction projects.

A baseline document change (BDC) request will be issued to our Configuration Management Section for official review, approval and implementation of revised NJDOT standard specifications. In order to assist us and expedite the specification revision process, please provide this office with your most current material specifications and details for the products tested and evaluated by this office.

Please note that continued use of your product on NJDOT construction and maintenance projects is contingent upon its future performance. The New Jersey Department of Transportation reserves the right to discontinue its use in the event that it does not perform or function as intended.

Please be advised that this letter is not to be used for advertising or promotional purposes without the written consent of the Commissioner of the New Jersey Department of Transportation. If you have any questions please feel free to call me at (609) 530-2290 and please refer to the QMS number appearing in the top right corner of this letter.

Thank you for your interest in improving New Jersey's transportation system.

Sincerely,

Angelo A. Mendola
